MINISTRY OF EDUCATION, ARTS AND CULTURE

NATIONAL ARCHIVES OF NAMIBIA

REGISTRY MANUAL

EDITED 2018

INTRODUCTION

This manual has been compiled by the National Archives of Namibia for the management record offices and registries. It is based on the Archives Code which has been issued to Officers in Charge of Archives.

CONTENTS

1. List of terms
2. Control of, custody over and inspection of archives
3. Registry procedures
4. Filing systems
5. Other Archives
6. Disposal
7. Transfer and re-issue of archives
8. Access to archives in offices

CONTENTS

1. **LIST OF TERMS**

2. **CONTROL OF, CUSTODY OVER AND INSPECTION OF ARCHIVES**
 - 2.1 General
 - 2.2 Officer in Charge of Archives
 - 2.3 Registry Head and staff
 - 2.4 Custody, storage and filing
 - 2.5 Inspection of archives

3. **REGISTRY PROCEDURES**
 - 3.1 Registry manual: compilation of and custody of
 - 3.2 Training of registry staff
 - 3.3 Accommodation and registry layout
 - 3.4 Furniture and other requirements
 - 3.5 Registers

 - 3.6 **File covers**
 - 3.6.1 Types of file covers
 - 3.6.2 Preparation of file covers
 - 3.6.3 Components of file covers
 - 3.6.4 Identification of file covers by colours
 - 3.6.5 Register of Files Opened

 - 3.7 **Incoming mail**
 - 3.7.1 Opening of mail bags
 - 3.7.2 Sorting of items
 - 3.7.3 Time of opening mail
 - 3.7.4 Who may open mail?
 - 3.7.5 Procedures during opening of mail
 - 3.7.6 Date stamping
 - 3.7.7 Registered and certified mail
 - 3.7.8 Parcels
 - 3.7.9 Incorrectly addressed mail
 - 3.7.10 Telegrams and express mail
 - 3.7.11 Submissions
 - 3.7.12 Receipt of money by mail
 - 3.7.13 Allocation of file numbers
 - 3.7.14 Placing of mail on files
 - 3.7.15 Numbering of items on files
 - 3.7.16 Control sheet
 - 3.7.17 Search for files
 - 3.7.18 Distribution of files from registry

3.8 **Outgoing mail**

- 3.8.1 File numbers
- 3.8.2 Instructions
- 3.8.3 Postage, weight, measurements, and packaging
- 3.8.4 Arrangements for dispatch
- 3.8.5 Registered mail
- 3.8.6 Certified mail
- 3.8.7 Air mail
- 3.8.8 Express mail
- 3.8.9 Telegrams
- 3.8.10 Foreign mail
- 3.8.11 Ordinary parcels
- 3.8.12 Certified parcels
- 3.8.13 Insured parcels

3.9 **Pending of files**

- 3.9.1 Necessity of pending system
- 3.9.2 Period
- 3.9.3 Which items should be pended?
- 3.9.4 Pending system: the diary/control sheet system

3.10 Filing of documents and storage of files

- 3.11 Personal files
- 3.12 Movement of files
- 3.13 Closing of files and Other Archives
- 3.14 Disposal of archives
- 3.15 Daily files
- 3.16 Circulars

4. **FILING SYSTEMS**

- 4.1 General
- 4.2 Components of a filing system
- 4.3 Master Copy
- 4.4 Register of Files Opened
- 4.5 Necessity for an efficient filing system
- 4.6 The “functional subject system”
- 4.7 Requirements of a good functional subject system
- 4.8 Techniques used
- 4.9 Use of a filing system
- 4.10 Alterations and additions to filing systems
- 4.11 Practical working of a filing system

5. **OTHER ARCHIVES**

6. **DISPOSAL**

6.1 General

6.2 Disposal instructions

6.3 Disposal of terminated correspondence files

6.4 Disposal of current filing systems

6.5 Disposal of terminated Other Archives

6.6 Disposal: List of Other Archives

7. **TRANSFER OF ARCHIVES AND THEIR RE-ISSUE**

8. **ACCESS TO ARCHIVES IN OFFICES**

1. LIST OF TERMS

Archives Act (no 12 of 1992)

Archives

All documents received or created in any Ministry, local authority, previous authority or statutory institution during the conduct of affairs in such office and which are from their nature or in terms of any other act not required then to be dealt with otherwise than in accordance with or in terms of the provisions of the Archives Act.

Other Archives

All archives other than correspondence files, for example registers, plans, computer tapes, discs and print-outs, punch cards, microfiche, films, slides, etc.

Terminated archives

The documentary remains of:

- activities for which the particular office is no longer responsible
- files of filing systems no longer in use and on which no further correspondence is placed
- archives which have been created for a specific purpose and are no longer in use
- archives taken over from another office, but which are no longer in use.

Closed archives

Closed volumes/items of a current File Plan or List of Other Archives

Current archives

Documents created within a current File Plan, current series of case files and Other Archives.

Disposal Authority

Authority obtained from the Head of Archives to either destroy archives or to transfer these to an archives depot for permanent preservation.

A.20

This means that twenty years after an item has been closed, it must be transferred to an archives depot. The period of 20 years is in accordance with legislation but archives may, with the permission of the Head of Archives, be transferred to an archives depot earlier or later than the specified 20 year period.

D, D followed by a figure

Destroy immediately or after the number of years indicated by the figure, for example an item closed in March 1991 with a disposal instruction D.3 can be destroyed in March 1994 if the Head of Archives has granted permission. N.B. Additional symbols are used for computer archives.

Retention period

The period for which an item must be retained in an office until it can be disposed of, for example A.20, D.3, and D.5.

Ephemeral archives

Archives for which a D-disposal guideline has been or will be given.

Head of Archives

All correspondence should be addressed to The Head of Archives, Private Bag 13250 WINDHOEK.

2. **CONTROL OF, CUSTODY OVER AND INSPECTION OF ARCHIVES**

2.1 **Control of archives**

2.1.1 The head of an office or in the case of a local authority or statutory institution, the chief executive official or a person delegated to fulfil this duty, is responsible for the custody, care and filing of all archives until they are transferred to an archives depot or an intermediate depot. The instructions of the Head of Archives in this respect shall be adhered to.

2.2 **Officer in Charge of Archives**

2.2.1 The head of an office shall appoint an official, called the Officer in Charge of Archives, to exercise control over that office's archives.

2.2.2 The duties of the Officer in Charge of Archives are as follows:

- a) The custody and care of the Master Copy of the filing system, the List of Other Archives and the Archives Code.
- b) Alterations and additions to the filing system and List(s) of Other Archives.
- c) Control over all aspects of the use of the filing system, in particular the correct classification of items, for example by checking the daily file.
- d) The periodical checking of policy files and A.20 files to prevent the placing of ephemeral items on these files.
- e) Control over the maintenance and application of the filing system in regional and branch offices.
- f) Responsibility for obtaining disposal authority for all current and terminated archives as well as the regular destruction or transfer of archives.
- g) Safety of archives.
- h) Compilation of a registry manual.
- i) Liaison with archives' officials during inspections.

2.3 **Registry Head and staff**

2.3.1 The duties of the Registry Head are as follows:

- a) Keeping of the registry manual.
- b) Opening of files, replacements of old file covers and new volumes when necessary.
- c) Placing of the official date stamp and correct file number on all incoming correspondence.
- d) Correct and neat filing of all items.
- e) Control over the placing of unnecessary duplicate or bulky items on correspondence files and ensuring that the necessary annexure files are opened.
- f) Keeping of the Register of Files Opened and the Destruction Register.
- g) Control over the maintenance of all copies of the filing system and List(s) of Other Archives by means of the distribution of amended pages to all officers having copies of filing systems and List(s) of Other Archives

2.3.2 Registry staff should attend courses offered by the National Archives.

2.4 **Custody, storage and filings**

2.4.1 Registry staff should ensure that:

- a) All archives are filed systematically and orderly according to established systems (approved filing systems and Lists of Other Archives).
- b) All archives are stored in areas protected against fire, floods and unauthorized entry.
- c) Archives are not damaged and destroyed without authority.

2.5 **Inspection of archives**

- 2.5.1 The Head of Archives is authorized to inspect the care, custody and filing of any archives which have not been transferred to an archives depot and to request any information from the Officer in Charge concerning these aspects.
- 2.5.2 Where it is apparent that archives have not, in the opinion of the Head of Archives, been stored, filed or cared for according to instructions, this must be rectified according to his instructions.
- 2.5.3 Registry staff should indicate all archives and registers to inspection staff and be generally helpful during inspections.

3. **REGISTRY PROCEDURES**

3.1 **Registry manual: compilation and custody of**

- 3.1.1 Every office falling under the Archives Act should compile a registry manual based on the procedures set out in this chapter.
- 3.1.2 The procedures and methods explained here are those which have been prescribed by the Ministry of Finance, Namibia Post and the National Archives.
- 3.1.3 This chapter discusses procedures and methods which are normally valid without considering any special circumstances which might exist in some offices. It is anticipated that some procedures may have to be expanded, adapted or differed from. For example, Treasury Instructions which have been quoted are not applicable to local authorities or statutory bodies but can be used as guidelines.
- 3.1.4 The registry manual should be compiled in such a manner that it can be used for training in the registry.
- 3.1.5 Concept registry manuals should be submitted for approval to the Head of Archives.
- 3.1.6 A copy of the final approved registry manual should be submitted to the Head of Archives.
- 3.1.7 The Officer in Charge and the Registry Head should keep an up to date copy of the registry manual. Any alterations/additions to the manual should be reported to the Head of Archives.

3.2 Training of registry staff

3.2.1 The registry manual and this chapter should be studied carefully by all registry officials under the guidance of the Officer in Charge.

3.3 Accommodation and registry layout

3.3.1 The desirability of a registry can be centrally and or decentralised. The possibility of it being situated in relation to the offices it serves cannot be too strongly emphasized. A central situation ensures the easier distribution and internal circulation of files. It is not possible to prescribe the ideal size of a registry, because offices differ in their complexity, but considering possible future development and mindful of the fact that it is undesirable for a registry to occupy several rooms, it is recommended that a registry should be large enough to allow for expansion.

3.3.2 The layout of a registry is closely connected to the shape and situation of the room and ought to be planned in such a way as to ensure an efficient work flow. Figure 1 shows the layout of a registry which can be used as a guideline.

3.3.3 Note that the working space for the registry staff is separated from the entrance to the room by a counter. The purpose of this is to prevent the entry of messengers and unauthorized visitors, etc., who sometimes have free access to registries which is not conducive to the safety of archives. It also has the advantage, especially in staff registries, of preventing officers from other sections and divisions having access to cabinets where personal files are stored.

3.3.4 If at all possible, only registry staff should fetch files for officials rather than each person having free access.

3.3.5 The office of the Officer in Charge should be as close as possible to the registry.

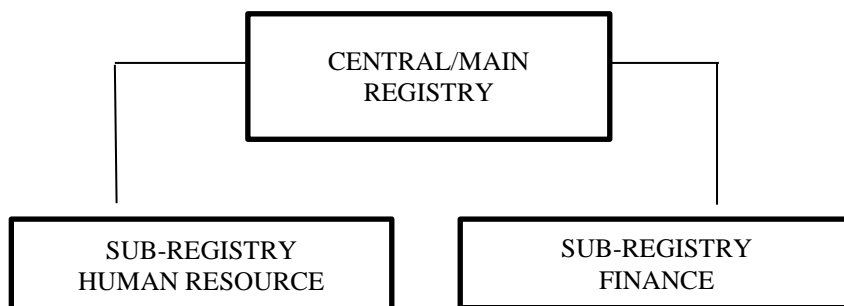

Fig.1 Recordkeeping system for public sector institutions

3.3.6 Sub-registries should not be allowed to become independent of the central/main registry. They remain answerable to the head of central/main registry, while all incoming and outgoing correspondence should be dealt with by central/main registry.

Because of their confidential nature, staff files, secret files and correspondence related to them should not be central/main registry's responsibility. Both staff files and secret files should be controlled by a senior official and stored/maintained in such a way as to ensure their confidentiality.

3.4 **Furniture and other requirements**

3.4.1 With the exception of smaller registries, i.e. ministerial branch registries, departmental and staff registries ought to possess the following essential items:

- a) Supervisor's desk
- b) Sufficient chairs
- c) Table(s) for opening of mail with sufficient portable pigeon holes for sorting
- d) Table(s) for the dispatch of mail
- e) Table(s) for filing postal items and sorting of files
- f) File distribution shelves with sufficient pigeon holes
- g) Trolley (lies) for transport of files
- h) Cupboard with doors for the storage of stationery and file covers
- i) One (or more) filing cabinet(s) (where necessary)
- j) Shelves
- k) Dispatch cabinet

3.5 **Registers**

3.5.1 The following registers should be kept:

Remittance register
Register of registered and certified mail received
Register of registered mail dispatched
Master Copy of filing system
Master Copy of List of Other Archives
Register of Files Opened
Destruction Register

3.5.2 **Non-prescribed registers**

3.5.2.1 Due to a tendency to expect the registry to take responsibility for everything received by an office, various non-prescribed registers are being kept. This tendency is unhealthy

and creates a feeling among registry staff that they are mistrusted and that they must produce documentary evidence to cover any eventuality when they are accused (often wrongly).

3.5.2.2 Examples of non-prescribed registers are:

a) Register of letters received

The register of letters received is frequently found. It is said to be useful in establishing whether or not a particular letter has been received and to determine on which file the letter was placed.

In the first place, this means a continual gathering of evidence which cannot be justified since it is always possible to obtain a copy of a letter if it disappears in the post or after receipt. In the second place the filing system ought to indicate where a particular letter should be filed.

b) Register of letters dispatched

The register of letters dispatched is kept for similar reasons.

3.5.3 Some offices receive original documents of intrinsic value which are irreplaceable if lost. In such cases it could be necessary that a register be kept recording the signature of the person receiving the document in order that responsibility can be established if the document is lost.

3.5.4 Officers in Charge should check regularly to ensure that no unnecessary registers are being kept.

3.5.5 It is extremely important that all registers kept by the Officer in Charge and the registry staff are clearly and correctly identified. The name of the office should appear on all registers.

3.6 File covers

3.6.1 Types of file covers

3.6.1.1 Public sector institutions should use the standard file cover (Figure 2). The covers are available in four colours - black, blue, green and red.

3.6.1.2 Local authorities and statutory institutions may use their own file covers but should ensure that these provide enough space for all the information required. The space for the file title may be blocked to ensure a neat appearance. The position of the file number depends on the type of storage used. The type of paper used for file covers depends on the frequency of use of files.

Figure 2 shows an example of a standard file cover.

3.6.2 **Preparation of file covers**

3.6.2.1 A neatly prepared file cover catches the eye and is an incentive to the person using it to keep it in the same good condition. Figure 7 shows an example of a well-prepared file cover.

3.6.2.2 Descriptions and numbers on file covers should be neat and readable. For this purpose broad drawing pens and stencils or a special typewriter with large letters may be used.

3.6.2.3 The description on the file cover should be short, yet effective and agree with the description in the filing system. Normally every component of the file number is indicated in the filing system and on the file cover. Long file titles may be shortened provided that the main series is given and that the description given casts no doubts on the contents of the file.

If problems in this respect are encountered, the National Archives may be consulted.

3.6.2.4 The following examples show long file titles correctly shortened:

Free distribution list

3.6.2.5 These examples contain sufficient information to enable the user to identify the file and its contents quickly. In all cases the main series must appear on the file cover. Where problems are experienced, the Officer in Charge should be consulted.

3.6.2.6 Some parts of the filing system have explanatory notes in brackets after the subject. These are for guidance only and should not appear on the file cover.

3.6.2.7 The volume number of the file must be indicated on the cover. Only Arabic numbers (1, 2, 3, etc.) may be used.

3.6.2.8 The period covered by the correspondence in the file should be indicated on the file cover. As soon as a volume has been closed, the date of the last item should be indicated on the file cover.

3.6.2.9 The vertical lines on the file cover are to facilitate the movement of files. (See paragraph 3.12.1.). The movement of the file is indicated on the outside of the cover making it unnecessary for registry staff to open the file in order to see where the file should be sent. Messengers can see where a file must go, thus the movement of files is more effective and efficient. Every column is used from the top downwards. It is seldom necessary to replace a file cover merely because all the columns have been used.

3.6.3 **Components of file covers**

3.6.3.1 A backing board with a paper fastener and a washer is placed in the file cover to hold the correspondence firmly. This is stapled or glued to the file cover but the top left hand corner remains loose. (These items are standard stationery obtainable from the stores.)

3.6.3.2 A self-piercing type of paper fastener about 5cm in length is pushed through the top left hand corner of the backing board about 4cm from the top and side. This fastener is pushed through the backing board only and not through the file cover as this causes files to catch each other in storage. An efficient one-hole punch is available.

3.6.3.3 A control sheet (fig. 8) is stapled to the inside of the file cover. The use of the control sheet is explained in paragraph 3.7.16.

3.6.3.4 Certain offices prefer to use "Indian" type fasteners as it makes the consultation of previous items in a file easier. This type of fastener has the disadvantage of breaking easily and does not keep the correspondence in a neat condition.

3.6.4 **Identification of file covers by colours**

3.6.4.1 Files identified by coloured spines and corners have practical value in the search for files. Different colours can identify different types of files (e.g. the various kinds of staff files in a staff registry) or can distinguish between files of different sections.

3.6.4.2 Files may be distinguished from each other by coloured tape along the spine. This is initially more work for the registry staff but the advantages of the system justify the additional time spent.

3.6.4.3 This may be done to distinguish files from different cabinets by various colour combinations. The combinations can be achieved by three strips of tape approximately 5cm long and 15mm wide affixed along the spine of the file. This may be used to distinguish either cabinets or main series. Colour combinations for 216 cabinets have already been worked out (figure 10).

3.6.4.4 This system allows misplaced files to be spotted as it is easy to spot a wrong colour combination. Misplaced files should thus be limited to within the same colour combination.

3.6.5 **Register of Files Opened**

3.6.5.1 As soon as a file has been opened, its particulars should be entered in the Register of Files Opened.

3.6.5.2 The Register of Files Opened, kept by the Registry Head, is a return of all files in use. It ensures that duplicate files are not opened by mistake.

3.6.5.3 There are various types of Registers

3.6.5.4 (a) Inward Correspondence Register

(b) Remittance Register

(c) Outward Correspondence Register

(d) File Transit sheet

(e) File Census Form

(f) Disposal Form

(g) Record Centre transfer list

3.6.5.5 The date in the "DATE OPENED" column is the date of receipt of the first item to be placed on the file, for example a letter written on 14 March 1994 which is received by the office on 20 March 1994 the date in the "DATE OPENED" column would be 20 March 1994.

3.6.5.6 Where there is a large number of case files a separate index card system may be used to trace individual files. This fact should be noted in the Register of Files Opened under the files concerned. An alphabetical index card system may not, in any circumstance be used for ordinary subject files.

3.6.5.7 A loose leaf register should be used for the Register of Files Opened so that extra sheets may be inserted when necessary.

3.6.5.8 A separate Register of Classified Files Opened should be kept, usually by the head of the office. Classified files are thus not entered in the Register of Files Opened.

3.7 **Incoming mail**

3.7.1 **Opening of mail bags**

3.7.1.1 Treasury Instruction JE 0101 reads as follows:

"All mail must be fetched from the Post Office by a responsible person and in the case of-

- a) departments hiring private bags, transported in the bag sealed by Post Office officials,
- b) departments hiring post boxes, placed and transported in a case or bag provided by the department."

3.7.1.2 On receipt of the mail in the registry the person(s) authorized to open should ensure that the private bag is still sealed or locked.

3.7.1.3 As soon as the bag has been checked, it should be opened and shaken out by the authorized person in the presence of at least one of the other officers whose duty it is to help with the opening of mail.

3.7.2 **Sorting of items**

3.7.2.1 All slips or advices of registered/certified mail must be placed on one side and handled according to paragraph 3.7.7.

3.7.2.2 Official letters addressed to a person by name are sent to that person unopened. If an envelope is marked "For attention" of a particular person, it is opened by registry staff and dealt with in the usual manner.

3.7.2.3 Private letters are delivered unopened to the addressee. It should be brought to the attention of all staff members that the office address should be used for private correspondence only if no other alternative is possible. Ideally no private correspondence should be dealt with in the registry. Where staff members have resigned items addressed to them should, after a reasonable time, be returned marked "Unknown".

3.7.2.4 Envelopes marked "Secret" or "Confidential" should be handed over unopened to the officer responsible for these.

3.7.2.5 Where a separate staff registry functions, all envelopes received in the general registry and marked "staff", should be sent unopened to the staff registry. In the absence of a staff registry all correspondence concerning staff matters should be opened by an officer appointed by the head of the office.

3.7.3 **Time of opening mail**

3.7.3.1 Incoming mail should preferably be opened once a day in the morning. Where the quantity of mail justifies it, or to avoid an accumulation of mail over a week-end, mail may be opened in the afternoon as well. All official postal items, except those marked "urgent", telegrams and express mail which are received during hours when mail is not opened, are placed unopened in a safe or other suitable place until the next time mail is opened. Postal items marked "urgent", telegrams, telex messages and express mail should receive attention on delivery.

3.7.4 **Who may open mail?**

3.7.4.1 Attention is drawn to Treasury Instruction JE 0802 which reads as follows:

"The duty to receive and open post and to enter in the remittance register details of all remittances and other negotiable instruments received through the post or otherwise, must be assigned, in writing to a responsible officer by the head of the office. Where possible a second officer must be appointed, in writing to assist in this duty."

3.7.4.2 This written authority must be placed on the specified persons' SP files and must be available for inspection purposes.

3.7.5 **Procedures during opening of mail**

3.7.5.1 While the registry staff is busy with the opening of mail, the registry should be closed for all other purposes. Telephone queries or requests for files during this time should be the exception. All staff members should be aware of this arrangement. Disturbance during the opening of mail is inadvisable as this task needs sustained concentration and should be dealt with as quickly as possible.

3.7.5.2 The mail should not be moved from table to table, thus there should be a large table available or sufficient smaller tables which may be pushed together.

3.7.5.3 Wire baskets or wooden racks are recommended for use on the tables because they are portable and may be removed when the tables are required for other purposes.

3.7.5.4 For all practical purposes it is sufficient to open an envelope on two sides. This facilitates the removal of the contents and ensures that nothing is left in the envelope. The practice of some offices to initial and/or retain the envelopes should be discontinued. It is doubtful whether this practice has any useful purpose. Only envelopes of undelivered letters should be attached to letters.

3.7.5.5 Envelopes should be thrown away as soon as it has been established that all the contents have been removed. An exception to this is envelopes containing publications for the ministerial library. These should be sent with the publication to the library.

3.7.5.6 The practice of initialling all letters should be discontinued except in cases where enclosures mentioned in letters have not been received. In these cases the fact is mentioned on the letter and initialled.

3.7.5.7 After the contents of the envelopes have been removed, these are quickly read to establish if annexures and/or money mentioned have been enclosed. At the same time loose annexures are attached to the letters and the first sorting is carried out whereby letters containing remittances are placed on one side, or are given to the officer responsible for the entering of

such items in the register of remittances received. If necessary, bulky items should be bound with tape.

3.7.5.8 Ensure that while documents are being attached to letters no damage is caused to original documents, e.g. educational certificates, by the use of pins, etc. See paragraph 3.7.14.2.

3.7.6 **Date stamping**

3.7.6.1 The office date stamp is placed on the first page of a letter. Annexures are not stamped. Seeing that a date stamp sometimes causes portions of letters to become illegible it is advisable that the date stamp be as small as possible. The date stamp should be placed on an open space on the letter. If there is insufficient space on the front of the letter, the date stamp should be placed on the back. Whatever the method chosen it should be consistently applied. Items such as leave forms, pay-sheets, etc., are normally not stamped, except for a specific reason.

3.7.6.2 After the date stamp has been placed on incoming items, the initials of the Registry Head on the letter are not necessary; neither should the item be entered into any register. These practices are time consuming and serve no purpose. Items for the staff registry which have been received by the main registry in ordinary envelopes and have been date stamped in the normal way are not date stamped again in the staff registry unless there is a considerable delay in receipt.

3.7.7 **Registered and certified mail**

3.7.7.1 These items are handled as ordinary mail with the addition of the procedures set out in the following paragraphs.

3.7.7.2 Treasury Instructions JE 0102 - JE 0107 read as follows:

"JE 0102 State that a list or slip with details of registered/certified items is drawn up in triplicate by the Post Office and the original is placed in the mail bag/box of the office concerned.

JE 0103 On receipt of the list or slip the person responsible in terms of Treasury Instruction JE 0204 enters the number of each registered/certified item and its place of origin in a register for registered/certified mail, signs the original list or slip and to be fetched by a reliable person, the person from the Post Office. All registered/certified items should be transported in closed containers.

JE 0104 On receipt, items should be checked against the list or slip to ensure that all items signed for have been received.

JE 0105 The items should be checked to see if they had been tampered with in any way. If any evidence of tampering is discovered, the Post Office official should be informed

immediately and he shall arrange for his supervisor to be present at the opening of such items to determine the contents or to establish if anything is missing. He will decide on what steps are to be taken.

JE 0106 The person responsible in terms of Treasury Instruction JE 0024 opens the items and enters the name of the sender and particulars of the contents of the item in the register against the numbers already entered. If the items contain remittances or negotiable instruments, it must be entered in the remittance register.

JE 0107 All cash and negotiable instruments received through the post or by delivery book must be handed over to the responsible person immediately and where applicable brought to account. Receipt must be acknowledged in the applicable column of the remittance register".

3.7.7.3 All slips or lists of registered/certified items must thus be entered immediately in the register.

3.7.7.4 An ordinary book may be used for this register.

3.7.7.5 The register must contain the following entries.

Date	Number	Place of origin and name of sender	Contents	Person opening	Person receiving

3.7.7.6 The following particulars of each slip should be entered in the register: date, number, place of origin.

3.7.7.7 Where the advices of registered/certified items are received in duplicate from the Post Office only one copy need to be kept for control purposes.

3.7.7.8 The slip or advices can now be exchanged at the Post Office.

3.7.7.9 On receipt of the registered/certified items from the Post Office it should be established if

all items have been received or if any have been tampered with.

3.7.7.10 After the documents have been removed from the envelopes, they are quickly read to ensure that any money or annexures mentioned have been received. At the same time loose annexures are attached to letters and letters containing money are placed on one side or handed to the officer responsible for entering items in the remittance register. If necessary, bulky items may be bound with tape.

3.7.7.11 Particulars of the contents are now entered in the register alongside the applicable number. If remittance has been received, only a reference to the remittance register need be made in the "contents" column.

3.7.7.12 Date stamps should be placed on items if necessary (see 3.7.6) and the items should be handed over immediately to the person appointed to handle the matter.

3.7.8 **Parcels**

3.7.8.1 Incoming parcels are opened and handled in the same manner as ordinary mail.

3.7.9 **Incorrectly addressed mail**

3.7.9.1 Incorrectly addressed mail should be returned.

3.7.10 **Telegrams and express mail**

3.7.10.1 Email should be opened immediately by the Registry Head or somebody appointed by her. She decides to whom telegrams should be delivered, with or without files. If the required file is not available, this should be indicated to the officer concerned. The officer is then responsible for further instructions to the registry staff.

3.7.10.2 A file containing a printed email is always delivered by hand.

3.7.11 **Submissions**

3.7.11.1 Submissions from high ranking officers should always receive priority. These are dealt with in the same manner as telegrams.

3.7.12 **Receipt of money by mail**

3.7.12.1 Letters containing remittances of any kind are placed on one side. If it appears that the remittance mentioned has not been received or that the amount differs from that indicated in the letter, this fact should be noted on the letter and initialled by two people.

3.7.12.2 The following extracts from Treasury Instructions must be strictly observed.

JE 0201 "Each office where remittances or any negotiable instruments are received must keep a remittance register as prescribed in Treasury Instruction JE 0203, for the recording of all remittances or other negotiable instruments received through the post or by delivery book.

JE 0202 Before a remittance register is brought into use, the head of the office or a person authorized in writing by him/her should ensure that the pages are numbered consecutively. The person specified in Treasury Instruction JE 0205 should, in the course of checking, verify that pages have not been removed from the remittance register.

JE 0203 The following particulars in respect of each item entered in terms of Treasury Instruction JE 0201, must appear in the remittance register:

- a) Date of receipt;
- b) Method of receipt (ordinary post, certified/registered post, delivery book);
- c) From whom received;
- d) Address of sender;
- e) Nature of remittance;
- f) Purpose received;
- g) Amount remitted (where applicable);
- h) Signature of persons present at opening of post;
- i) Signature of person to whom handed over;
- j) Receipt number or other method of disposal; and
- k) Signature of person checking register in terms of Treasury Instruction JE 0205, and date of checking.

JE 0205 The head of office or a responsible person appointed by him/her must check the remittance register at least once a week to ensure that all items have been properly entered and where applicable, brought a forth. The last column of the remittance register should be signed and dated to indicate that all procedures have been completed with.

JE 0206 Persons receiving remittance or negotiable instruments per hand must verify the contents and if entered in a letter delivery book must sign that book as acknowledgement of receipt and immediately enter or have such items entered in the remittance register."

3.7.12.3 The remittance register (Z.94) must be used by Public Service offices.

3.7.13 **Allocation of file numbers**

3.7.13.1 The mail is sorted as follows:

- Those items where the offices own file number appears;
- Those items with no file number; and
- Those items requiring no file number, for example leave forms, accounts.

- 3.7.13.2 Where the file reference number does appear, it is checked and written in pencil in the middle of the letter and the items are then handed to the responsible officer, who withdraws the files or searches for them.
- 3.7.13.3 Letters without file reference numbers should be read carefully by the Registry Head to ensure that the letter is placed on the correct file. The filing system itself must be used, not alphabetical indices, etc. Note that the subject is determined by the contents of the letter and not by the heading, which may be misleading.
- 3.7.13.4 First, consult the List of Main Series of the filing system and decide on a suitable main series by eliminating unsuitable series.
- 3.7.13.5 Next, identify the main subjects listed in the particular main series by checking all those file numbers which only have two components, e.g. 13/1, 13/2, 13/3, etc. Decide on a suitable main subject by eliminating unsuitable ones.
- 3.7.13.6 Suppose that 13/2 is the main subject heading. Identify all the subdivisions of 13/2. This means all file numbers beginning with 13/2 and consisting of three components, e.g. 13/2/1, 13/2/2, 13/2/3, etc. Decide on the correct subdivision, for example 13/2/3 by eliminating unsuitable ones.
- 3.7.13.7 If 13/2/3 is underlined or subdivided, consult the sub files listed until the correct file is identified.
- 3.7.13.8 If no suitable subject is found after following the procedures set out in 3.7.13.5 and 3.7.13.6, this indicates that special provision has to be made for that particular item. This may be a new file, a new subject or even a new main series.
- 3.7.13.9 Consult the Officer in Charge, who will in consultation with the National Archives, make a suitable alteration/addition to the filing system.
- 3.7.13.10 N.B. Do not place items on the closest file or on a policy or routine enquiries file if a suitable file does not exist. Remember that everybody who uses the filing system should arrive at the same file for a particular subject. This will not happen if correspondence is "pushed in" somewhere.
- 3.7.13.11 At the same time determine whether more than one subject is being dealt with in the letter. If so, copies must be made for the files concerned and placed on these files.
- 3.7.13.12 In cases of doubt the Officer in Charge should be consulted.

- 3.7.13.13 Officers responsible for correspondence should check that correspondence is placed on the correct file, and in cases of doubt the Registry Head should be consulted.
- 3.7.13.14 In offices where staff files are not numbered, it is sufficient to underline the name of the person referred to in pencil and to indicate at the top of the letter which file is required, e.g. SP, SF, SL or SA for personal, financial, leave or accident files.
- 3.7.13.15 Items which do not receive file numbers should either be placed on the applicable file or sent in a cover to the section concerned.

3.7.14 Placing of mail on files

- 3.7.14.1 As soon as file numbers have been allocated to incoming mail, the relevant files are fetched, the items placed on the files and the control sheet filled in. The practice of placing incoming items on the outside of the file or loose within a file should be discontinued.
- 3.7.14.2 Documents which have to be returned to the sender, e.g. certificates, wills, copies of deeds, etc., should be placed in an envelope and attached to the inside of the right hand portion of the file cover. See also paragraph 3.7.5.8.
- 3.7.14.3 If a file cannot be located at the first attempt or within a reasonable time, the items should be sent through to the division/section concerned. If the item cannot be dealt with without the file, the registry should attempt to trace the file.
- 3.7.14.4 If, after repeated attempts, the file cannot be traced, a duplicate file may be opened and this fact noted in pencil in the Register of Files Opened. See also paragraph 3.12.13.
- 3.7.14.5 It is not essential that every item be placed on a file before being dealt with by officers. Thus many items, e.g. leave forms, financial statements, claims, accounts, etc. may be sent without files to the relevant sections/officers. These may be returned to the registry for filing. This method eliminates a great deal of work and prevents the unnecessary movement of files.

3.7.15 Numbering of items on files

- 3.7.15.1 The numbering of items on a file has advantages in that it ensures that
- Items do not get lost;
 - The chronological order of the file is not disturbed;
 - Every item is dealt with;
 - Specific items can be referred to by quoting the item number instead of "see item marked A" or similar instructions. Such indications are usually removed once the matter has been dealt with and at a later stage there is no clarity on what was meant by "item A".
- Outgoing items and related items on the file can be referred to by the item number. Pages as such are not numbered. Each item is seen as an entity and receives one number. Thus

it is unnecessary that items be filed in reverse order.

3.7.16 **Control sheet** (system of dealing with items within files)

3.7.16.1 The purpose of the control sheet is to ensure that all incoming items and instructions on the files receive attention. It is the duty of the registry staff to ensure that every item has been dealt with, i.e. has been marked "file", or an indication given that it must be pending, although the file itself is replaced in the cabinet or on the shelf. If such instructions are not given, the file is returned to the responsible officer for the necessary instructions. Old control sheets may be destroyed once all items have been dealt with.

3.7.16.2 The control sheet system has certain advantages, e.g.

- a) Correspondence is immediately placed on a file, thus it is protected from damage and loss;
- b) It ensures that all items on the file receive attention because it may be determined from the "Pend" or "File" column which items have not received attention. Registry staff need not look through the file for further instructions;
- c) It eliminates the writing of instructions, decisions, etc. on the correspondence itself. Such instructions are frequently confusing and illegible because of limited space. This creates an untidy appearance;
- d) it serves as a control measure for supervising officers of the various administrative sections in that the control sheet can be used to determine whether correspondence has been dealt with, and how long it has taken to be answered;
- e) The use of the control sheet system ensures that incoming items are placed on files immediately after receipt, and that each item is numbered with the next consecutive number. This ensures that items on the file are placed in chronological order; and
- f) It simplifies the maintenance of a pending system.

3.7.16.3 The control sheet procedure is as follows:

- a) The registry allocates a number to each item (whether one page or more) beginning from 1 on each file. This number is written in the top right hand corner and circled;
- b) The item is placed on the file in the usual manner;
- c) the registry completes the control sheet by writing the number of the item in the "Item" column, and marks it out to the responsible officer (usually the section head) using his/her code letters in the "for attention of" column;

- d) Files are sent to the section heads either by marking the outside of the file or by pigeon hole divisions;
- e) The section heads make the necessary remarks and give instructions on the item if there is enough space for this to be done. If not, an unused A4 sheet of paper is used for further instructions. This is given the next consecutive number and placed on the file in the usual manner. The control sheet is then completed and the previous item marked in the "File" column, followed by the code letters of the officer concerned;
- f) The section head sends the files to the officer responsible for dealing with the matter;
- g) if this officer has to make a submission to his/her seniors, he/she should do this on a separate piece of paper, allocating the following number to it and completing the control sheet;
- h) The submissions may have to be seen by various officers - this is achieved by indicating the relevant code letters in the third column. When an officer has seen the item, he/she cancels his/her code letters;
- i) If a letter has to be dispatched, the responsible officer checks the typing and allocates the following number to the file copy of the letter. The control sheet is completed by marking the "file" or "pend" column;
- j) If the "pend" column is marked, the pending date followed by the officer's code letters is filled in;
- k) The officer places the letter, the file copy and the daily file copy loose within the file and sends it to the section head;
- l) After checking and signing, the file is sent to the registry;
- m) the registry deals with the outgoing letter, files the file and the daily file copies, and deals with the file according to the instructions on the control sheet, i.e. replaces file or pends it;
- n) If items on the control sheet have not been dealt with, the file is sent to the section concerned. It is the responsibility of the registry to ensure that no file is stored until all items have been dealt with by the person concerned;
- o) If the file is not available when an item arrives in the registry, it is punched for filing, and a slip "Item to be placed on file", is attached to it (see example below). The responsible officer places the item on the file when he/she receives it, allocates the

following item number to it, and completes the control sheet. If he/she does not have the file, or it cannot be found, he/she sends the slip back to the registry with the request to search for the file and to send it through when found. In the meantime the item remains with the officer for the necessary attention.

ITEM TO BE PLACED ON FILE.

To..... (Code letters of officer concerned)

1. The file for this item is not in the registry.
2. Please place this item on the file, allocate the following item number to it (in the top right hand corner) and complete the control sheet.
3. Destroy this slip as soon as the item has been placed on the file.

To Registry

(delete what is not applicable)

1. The file can't be found here. Please search for it and return to _____
2. The file is attached.

3.7.16.4 It is unnecessary to use control sheets in files which do not normally contain correspondence e.g. leave files, files where statements, etc. are placed.

3.7.17 **Search for files**

3.7.17.1 Only in exceptional circumstances should the registry be requested to search for a file urgently because such requests disrupt the work of the registry.

3.7.17.2 The search list for missing files should be compiled according to file numbers. The mail for the missing files should also be sorted according to file numbers.

3.7.17.3 The offices are then systematically searched and, when files are found, the correspondence is placed on them and a note made on the control sheet - see paragraph 3.7.16. It should be pointed out to the officer concerned that new correspondence has been placed on the file. If he/she is absent the file should be placed in his/her "IN" basket.

3.7.17.4 Files should not be removed from an officer's desk without his/her permission. If he/she is

absent a note should be left to indicate the whereabouts of the file.

3.7.18 **Distribution of files from registry**

3.7.18.1 After the incoming mail has been placed on the files, these are gathered in one place in the registry from where they are distributed to the officers or sections concerned. This is achieved by sorting them into clearly marked pigeon holes from where the messenger can deliver them to the sections/officers concerned. This sorting is carried out at regular intervals.

3.7.18.2 Registry staff should note the condition of the files and should arrange for opening of new volumes if current volumes become too thick. Files which are too thick look untidy, are difficult to handle, and are easily damaged.

3.8 **Outgoing mail**

3.8.1 **File numbers**

3.8.1.1 It is not the duty of registry staff, but that of the officer concerned to allocate correct file numbers to outgoing mail. Any problems in this regard should be discussed with the Officer in Charge.

3.8.2 **Instructions**

3.8.2.1 All officers handling outgoing mail should be conversant with Post Office and Treasury Instructions as set out in the Postal Guide and Treasury Instructions.

3.8.3 **Postage, weight, measurements, and packaging**

3.8.3.1 The Postal Guide contains full particulars of postage, weight, measurements and packaging, thus it is unnecessary for these to be repeated here.

3.8.4 **Arrangements for dispatch**

3.8.4.1 To ensure that letters are posted with the minimum of delay, it is advisable that files containing such letters are taken from the "post" pigeon hole of the officer to the registry officer responsible for the dispatching of mail. Each corresponding officer should have a "post" pigeon hole on his/her desk. (Figure 11)

3.8.4.2 The practice of placing letters for dispatch on top of files so that these are more easily identifiable cannot be allowed as this may cause damage to the mail and items can easily be lost.

- 3.8.4.3 The dispatch of all mail is carried out by the responsible registry officer from one place in the office which is the dispatch table. Files with post to be dispatched are placed by the messenger in marked pigeon holes in the file rack (figure 2). The responsible registry officer fetches these items, for this reason the dispatching table should be situated as near as possible to the file rack.
- 3.8.4.4 The responsible registry officer ensures that the date stamp appears on the outgoing item, as well as on the file and daily file copies, that each item is signed or bears a name stamp, and that all enclosures indicated in the letter are attached.
- 3.8.4.5 Where mail cannot for one or another reason be dispatched on a particular day the date of dispatch should not be typed on the letter. Date stamps should be used.
- 3.8.4.6 The mail is then placed in the pigeon hole of the dispatch cabinet, while the file is placed on the right hand side of the table to be collected for storage or redistribution.
- 3.8.4.7 Items to be dispatched consist of the following:
- a) Ordinary mail dispatched by the Post Office;
 - b) registered mail dispatched by the Post Office;
 - c) Certified mail dispatched by the Post Office; and
 - d) Ordinary mail delivered by the messenger to various destinations.
- 3.8.4.8 There ought to be sufficient pigeon holes for the various categories of mail.
- 3.8.4.9 Where the amount of mail to be dispatched is small, they do not need a dispatch cabinet.
- 3.8.4.10 In order to minimize time spent in addressing envelopes, window envelopes (for letters to members of the public) and they must be stamped.
- 3.8.4.11 All envelopes and other items dispatched by Government Service offices must bear the office stamp in the bottom right hand corner.
- 3.8.5 **Registered mail**
- 3.8.5.1 Refer to the chapter "Registration" in the "**Postal Guide** from Nampost".
- 3.8.5.2 Only important documents and correspondence which for various reasons must be signed for on receipt should be sent by registered mail. In these cases the Post Office provides proof of receipt of the item to the sender.
- 3.8.5.3 Registered mail should be kept in a separate pigeon hole until the last clearance of the day, when these are dispatched.
- 3.8.5.4 The officer responsible for dispatching registered mail should ensure that:

- a) The envelope is properly sealed and bears a blue cross;
- b) A registration label is placed in the top left hand corner of the addressed side of the envelope; and
- c) A list of registered mail is compiled in duplicate (fig. 5).

3.8.5.5 This form provides space for the office's file number. It is unnecessary to fill this in as the Post Office has no interest in it. The column can be used profitably for noting dates and reference numbers of individual letters. The book is taken with the letters to the Post Office where the original is retained and the duplicate returned with proof of acceptance issued by the Post Office.

3.8.5.6 A single registered item need not be entered on a list, but can be taken to the Post Office and handed in, whereupon an acceptance receipt will be issued. The acceptance receipt may then be filed with the covering letter.

3.8.5.7 All registered items should be handed in at the Post Office counter, under no circumstances should these items be placed in a mail bag or mail box.

3.8.5.8 Labels for registered post are available on request at any Post Office.

3.8.5.9 To prevent misuse, these labels should be stored in a safe place.

3.8.6 **Certified mail**

3.8.6.1 Certified mail is used in cases where it is necessary that the signature of the addressee should be obtained, but where it is not necessary that the Post Office should provide proof of acceptance.

3.8.6.2 Certified mail labels are available on request at any Post Office.

3.8.6.3 These labels are issued in duplicate. One label is placed in the top left hand corner of the addressed side of the envelope, while the other is placed on the file copy of the letter. A register of certified mail dispatched is not kept.

4.8.6.4 These items are dispatched together with ordinary mail in the mail bag. They are not entered in a register.

3.8.7 **Air mail**

3.8.7.1 Refer to the chapter on "Air Mail" in the "**Postal Guide**" acquired from Nampost.

3.8.7.2 All official standard sized items destined for places outside Namibia are sent by air mail. Bulky items should be sent by ordinary mail.

3.8.7.3 All air mail should be provided with blue air mail stickers in the top left hand corner of the envelope.

3.8.8 **Express mail**

3.8.8.1 Refer to the chapter on "Express Mail" in the "**Postal Guide**" from Nampost.

3.8.8.2 Only in exceptional cases should a letter be sent by express mail.

3.8.8.3 A red "Express Mail" label should be provided in the top left hand corner of the envelope. If such a label is not available, the word "EXPRESS" should be written in red in the same space. A red horizontal line should be drawn on the envelope.

3.8.8.4 An express mail item should be handed in at the Post Office counter. Under no circumstances should it be placed with other items in a mail bag or mail box.

3.8.8.5 Express mail items should, wherever possible, be sent to a street address rather than to a mail bag or mail box.

3.8.9 **Telegrams**

3.8.9.1 Refer to the chapter on "Telegrams" in the "Postal Guide".

3.8.9.2 Telegrams should only be sent in exceptional cases. In cases where the telegram is only in the interest of the addressee, the telegram should be sent "Collect" so that the costs can be recovered from the addressee.

3.8.9.3 A telegram should be short and to the point without using the normal forms of letter writing. Where possible telegraphic addresses should be used.

3.8.9.4 It is unnecessary to keep a register of telegrams dispatched because telegrams are no more than urgent letters. The original is handed in at the Post Office and the copy filed on the relevant file.

3.8.9.5 To ensure that reply telegrams received are referred to the correct section, each section should have its own telegram book provided with a code, e.g. A, B, C, etc., and this code with the number of the telegram, e.g. A.1, A.2, forms the reference number of each telegram. The reply telegram will bear the reference and can immediately be referred to the correct section. Each new telegram book is numbered from 1.

3.8.10 **Foreign mail**

- 3.8.10.1 Refer to the chapter on "Foreign Mail" in the "Postal Guide".
- 3.8.10.2 Foreign mail from Government Service offices should not be placed in the mail bag with other mail. Each item should be entered in triplicate on the prescribed form and handed in at the Post Office counter. The Post Office stamps all three forms and hands one back as proof of acceptance.

3.8.11 **Ordinary parcels**

- 3.8.11.1 Refer to the chapter on "Internal and Foreign Parcels" in the "Postal Guide".
- 3.8.11.2 Usually the messenger prepares the parcels for dispatch and gives these to the responsible registry officer, who addresses them by means of the tie on/stick on labels provided by the Post Office. The office stamp and the word "OFFICIAL" should be placed on the parcel for identification purposes by Government Service offices.
- 3.8.11.3 Ordinary parcels for internal delivery are placed in the post bag together with the other mail. In Windhoek, parcels should be taken to the parcels section of the Post Office.

3.8.12 **Certified parcels**

- 3.8.12.1 A certified parcel is dispatched in the same way as a certified letter (see paragraph 4.8.6).
- 3.8.12.2 Files are always dispatched by registered post.

3.8.13 **Insured parcels**

- 3.8.13.1 Insured parcels should be handed in at the Post Office counter.
- 3.8.13.2 A proof of acceptance slip should be obtained for every parcel and placed on the file copy of the covering letter.

3.9 **Pending of files**

- 3.9.1 To ensure efficient administration every office should use some form of pending system.

3.9.2 **Period**

- 3.9.2.1 From its very nature it is impossible to establish fixed pending periods. Factors such as the distance between correspondents, the nature of the correspondence, and the type of information expected in reply, all play a part. Each case should be judged on its merits, though the period should not be so short as to cause the unnecessary movement of files.
- 3.9.2.2 Although no fixed procedure for the pending of files can be prescribed, some smaller offices use the practice of pending files for certain dates e.g. 15th and 30th/or the 10th, 20th

and 30th of a month. This has the advantage that registry staff do not have to withdraw files each day, and the corresponding officers can plan their work to include pended files on those particular days. In larger offices this practice could cause disruption to normal registry activities if large quantities of files have to be withdrawn on certain days. Officers may, for their own convenience and work planning, specify files to be pended for certain days of the week.

3.9.2.3 It is not the responsibility of the registry staff to decide how long an item must be pended and even less so to send out reminders.

3.9.3 **Which items should be pended?**

3.9.3.1 It is a general practice in some offices to pend an item regardless of whether a reply is expected or not. An item should only be pended if the writer expects a reply.

3.9.3.2 If Mr X requests a copy of a document and he is informed that this can be supplied on payment of a certain amount, it is not necessary to pend the correspondence because a reply has not been requested. If Mr X still wishes a copy of the document, he himself will see to it that the necessary steps are taken.

3.9.3.3 In another case an officer has been transferred and requests payment of a transfer allowance; he is requested to provide certain particulars before such a payment can be considered. If he does not respond to the request, the office does not suffer and it does not help to pend the file.

3.9.3.4 Suppose that Mr X has been provided with the copies he desired but pays insufficient money for these and is requested to send the necessary money; in this case the file should be pended to ensure that the matter is finalized.

3.9.3.5 The questions that should be asked on the pending of files:

- is a reply insisted upon?
- Will the matter, seen from the point of view of the writer, be prejudiced in any way if no answer is received?

It has been found that the use of this technique has reduced the amount of files pended thus reducing the work load of the registry staff and the movement of files.

3.9.4 **Pending systems: the diary/control sheet system**

3.9.4.1 Various pending systems are in use but only one is recommended i.e. the diary system maintained by the Registry Head.

- 3.9.4.2 When an officer wishes an item to be pended, he/she indicates the pending date on the control sheet together with his/her code.
- 3.9.4.3 On receipt of the file, the registry staff check the file to see which items should be pended by consulting the "pend" column of the control sheet. The Registry Head keeps a diary where all items which have been marked "pend" are entered under the date given. This is done in the following manner: file number, item number, code of official concerned. The Registry Head checks the diary each morning to determine which files must be sent to which officers.
- 3.9.4.4 When the item has been finalized, the "file" column on the control sheet is completed. The file is then replaced by the registry staff in its correct place.
- 3.9.4.5 This simple but efficient system ensures that items not finalized are not permanently filed away.

3.10 **Filing of documents and storage of files**

- 3.10.1 Before a file can be stored the registry staff should ensure that all correspondence has been attended to. This is done by checking the control sheet to see that all items have been marked "file" or "pend".
- 3.10.2 The Registry Head should ensure that instructions to pend or file are carried out.
- 3.10.3 Where a "pend" date appears, this should be entered in the pending diary.
- 3.10.4 Files should be kept in a neat condition. The file cover should be clean and in one piece, the correspondence secured neatly, the paper fastener undamaged, and all pins and paper clips removed. Repairs to a file should be carried out before storage or return to officers.
- 3.10.5 As soon as a file reaches a thickness of 3cm, it should be closed and a new volume opened (see paragraph 3.13.1.1). Where the "Indian tag" is in use, files should be closed when they reach 2cm.
- 3.10.6 The filing of both incoming and outgoing mail takes place in the registry.
- 3.10.7 Items should be secured inside the files. Where the paper fastener is in use, the washer should be placed on top of the last item on the file. When the next item is filed, the washer is removed and replaced on top after filing.
- 3.10.8 Documents should be filed in chronological order with the latest on top. An annexure forms part of the document under cover of which it was received, regardless of the date of such an annexure. The date of receipt, and not that of dispatch, is used for the filing of

incoming items.

- 3.10.9 Only one copy of any outgoing item is placed on the file. More than one copy of the same item on a file serves no purpose and causes the file to become too thick and causes difficulty in tracing items.
- 3.10.10 Cross-filing is useful and in some cases necessary. When it is necessary to cross-file, the corresponding officer should ensure that sufficient copies of the item are prepared. Only one reference number should appear on the outgoing letter. The corresponding officer provides the alternative numbers on the extra copies which have been prepared.
- 3.10.11 Bulky documents, such as reports and minutes of meetings, should not be filed with other documents, but should be placed in an annexure file cover and this fact noted on the file concerned. The file cover should bear the reference number and the words "Annexure". Each item on the annexure file should be identified by quoting the covering letter concerned, its date and office of origin. No correspondence should be filed on annexure files.
- 3.10.12 If the office has a library, all publications not requiring ministerial attention should be stored there. Publications ought not to be filed.
- 3.10.13 Valuable documents must be protected against damage. It should be ensured that the loss of these does not bring the office into disrepute. Personal documents which have been submitted for notification purposes should be placed in an envelope attached to the flyleaf of the file until they are returned to the owner. In other cases documents should be kept in a safe place, and a note to this effect placed on the file concerned. (See also paragraphs 3.7.5.8 and 3.7.14.2).
- 3.10.14 Files are stored strictly according to the filing system, or alphabetically or numerically or alpha-numerically in cabinets or on shelves. (See figures 12 and 13).
- 3.10.15 Files from one filing system, for example a main filing system, should not be mixed with those of another filing system, for example a staff filing system.

3.11 **Personal files**

- 3.11.1 The Office of the Public Service Commission has approved the use of four personal files per officer. These are the SP, SL, SF and SA files. Offices can however open files according to their needs.
- 3.11.2 The following are guidelines for the opening of these files:

SP files

To avoid the creation of unnecessary personal files, individual sub-files for applicants may be opened. Personal files are opened when the applicant assumes duty and the relevant documents transferred from the sub-files. For this purpose it is necessary that registry staff place all the documents concerning each applicant on a separate sub-file and send it to the section concerned. In cases where applicants do not accept the position, the contents of the sub-files may be placed on the relevant subject file. In cases where applicants assume duty immediately, that is where the applicant's application for employment and the assumption of duty advice are received simultaneously, a personal file is opened immediately.

SL files

A leave file is opened once the first application for leave has been received. After receipt of the first leave form the leave clerk endorses the form, "first application", and sends the form to the registry where a leave file is opened. As soon as a SL file is opened this fact is noted on the official's SP file in the "reference" column.

SF files (also known as ST files)

Financial files are opened when a financial matter, for example the payment of an allowance, a claim for subsistence and transport, etc., is dealt with for the first time. As soon as a SF file is opened, this fact is noted on the official's SP file in the "reference" column. Reference to this on the SP file is necessary so that no doubt exists that a SF file has been created.

SA files

Accident files are opened as soon as an accident occurs. The opening of such a SA file is recorded in the "reference" column of the SP file.

3.11.3 Although file covers in four different colours can be used to distinguish between the types of personal files, it is advisable that the various types of staff files are stored in separate cabinets.

3.11.4 Files forming part of a staff filing system should not be mixed with files from any other system.

3.12 **Movement of files**

3.12.1 The movement of files between sections and officers is indicated on the front cover of the file or by the use of pigeon-holes.

3.12.2 Corresponding officials should ensure that files no longer required are returned to the registry as soon as possible.

- 3.12.3 Although in some cases it is necessary that files should flow via the registry, it is unnecessary to keep a register of this movement. (See also paragraph 4.6.2.9).
- 3.12.4 It has been proved by experience that no system which attempts to determine the whereabouts of any file at any given moment has been successful. Such a system is very time-consuming.
- 3.12.5 Such a system can only work if the registry is aware of every movement of a file, but the time that this would occupy can be used more profitably. Besides this, more registry staff would be needed to keep such a system up to date.
- 3.12.6 A system whereby a file must move via the registry from one person to another in order to record such movement, occupies too much time and too much movement of files (see figure 14). 4.12.6.1 Suppose that:
- a) A file must move from Mr A to Mr E via Mr B, C and D;
 - b) Mr A's office is ten metres from the registry and the other offices are ten metres apart, and
 - c) Files are distributed each hour.
- 3.12.6.2 If the file is removed from Mr A's office at 8h00, it will only reach Mr E at 16h00 if the file has to pass through the registry each time, after having travelled 240 metre.
- 3.12.6.3 If the file does not pass through the registry Mr E will receive the file at 11h00, after it has travelled only 40 metre.
- 3.12.6.4 Points 3.12.6.2 and 3.12.6.3 are graphically illustrated in figure 14.
- 3.12.7 Where the movement of files is controlled, the "80-20" principle is usually applicable, i.e. approximately twenty percent of circulating files are required at any given moment while eighty are not required. In other words, the movement of one hundred files is noted while only twenty need to be traced.
- 3.12.8 For this reason control systems are not recommended.
- 3.12.9 While no control is necessary over the movement of files within a division or section, it is, however, necessary to note the movement of files to another division or section which does not normally deal with these files. For example, staff files may be sent to the accounts section or files may have to be sent to another building.
- 3.12.10 It is recommended that when this occurs, a card is placed where the file is normally housed with the following particulars:
- a) File number;

- b) Place to where file has been sent; and
- c) Date of sending

3.12.11 When the file is needed, it can quickly be determined where it was sent. Files which have been returned from other divisions/sections should thus be brought to the attention of registry staff in order that the card can be removed.

3.12.12 A supply of cards should be kept for this purpose and kept in the registry office. All that is necessary is lines drawn on a sheet of paper and this glued to a card board backing board.

3.12.13 When a file is lost, a temporary file should be opened and this fact noted in the Register of Files Opened. Efforts to trace the missing file should be continued. As soon as the original file has been found, the contents of the temporary file should be combined with it. (See also paragraph 3.7.14.5.)

3.13 **Closing of files and Other Archives**

3.13.1 **Files**

3.13.1.1 As soon as a file reaches a thickness of 3cm it should be closed. The correspondence should be checked page for page to ensure that all items are in the correct place and that there are no misfiled items. The last item on the file should be a sheet of paper with the words "Closed, see volume".

3.13.1.2 Volumes are numbered consecutively in Arabic figures i.e. 1,2,3. Letters of the alphabet or Roman numerals should not be used.

3.13.1.3 If the file cover is damaged in any way it should be replaced.

3.13.1.4 Closed files should be safely stored until they may be destroyed in terms of disposal authorities or transferred to an archives depot.

3.13.2 **Other Archives**

3.13.2.1 The 3cm thickness applicable to files does not apply to Other Archives, but the thickness of these items should remain manageable.

3.13.2.2 There is no special closing procedure for Other Archives except that A.20 items are clearly identified and the name of the office of origin appears before transfer.

3.14 **Disposal of archives**

3.14.1 It is the duty of the Officer in Charge to obtain disposal instructions from the Head of Archives for all archives in his/her office. See chapters six and seven.

3.14.2 As soon as disposal guidelines have been issued, a **Destruction Register** should be compiled.

3.14.3 This register is compiled on a year basis, for example 1991, 1992, 1993, etc. As soon as a volume or item has been closed and it has a V disposal guideline it is entered under the year in which it qualifies for destruction.

For example, an item closed in 1988 and having the disposal guideline V.3 is entered on the 1991 page. In this manner one can determine which items qualify for destruction in a particular year.

3.14.4 The registry staff are responsible for the Destruction Register. This should be a loose leaf register which allows extra pages to be added when necessary.

3.15 **Daily files**

3.15.1 There are three main advantages of daily files:

- Firstly these enable the office's management to see what work is being done and its quality and standard.
- Secondly the daily file is an important training aid, as it gives all staff members the opportunity to gain a broad view of the activities of the office and enables them to become aware of the activities of other sections.
- Thirdly it enables the Officer in Charge to ensure that correspondence is placed on the correct file.

3.15.2 The daily file need not contain a copy of every letter dispatched. Copies of routine letters and reminders need not appear on the daily file. The same applies to confidential letters. The Officer in Charge decides on the type of correspondence which need not be placed on the daily file.

3.15.3 In large offices the circulation of the daily file begins the morning after the date of dispatch of the letters, and should be handled quickly. Normally it should not be held longer than one file clearance. This is essential if management is to be kept up to date and if mistakes are to be rectified quickly. Where circumstances permit, the daily file may be circulated weekly, but this is naturally less effective in correcting mistakes in outgoing mail.

3.15.4 As soon as the daily file has been circulated it has served its purpose. If space is available, it is sometimes convenient to retain daily files for up to a year for reference purposes. Afterwards the Head of Archives may be asked for permission to destroy them.

3.16 **Circulars**

3.16.1 All offices issue and receive circulars.

3.16.2 **Circulars received**

It is not necessary to place all circulars received on files. If a circular concerns one particular subject a copy may be placed on the applicable subject file. Circulars received are usually stored outside the filing system in suitable containers or files. Circulars should be kept in correct numerical order to facilitate reference work.

3.16.3 **Circulars issued**

Copies of circulars issued should be filed on the applicable subject files within the approved file plan as well as either on a specific file in the file plan or stored outside the file plan. Circulars should be stored in correct numerical order.

4. FILE PLANS

4.1 General

4.1.1 In terms of the Archives Act all file plans used in offices have to be approved by the Head of Archives.

4.1.2 File plans in use and not approved by the head of Archives should be submitted for approval.

4.1.3 Once a new file plan has been implemented no correspondence may be conducted on any file from the previous system except for case files. The files of the previous system should be closed the day prior to the implementation of the new system and no items may be transferred to files in the new system. If necessary case files should be re-numbered to fit in with the new system.

4.1.4 The file plan should be in the charge of an officer with a rank not lower than control officer (Senior Administrative Officer in local authority offices) and no alterations/additions may be made without this officer's permission.

4.2 Components of a file plan

4.2.1 A file plan consists of the following components:

Contents page

General Instructions

List of Main Series

Numerical layout

List of Independent Case Files

Annexures

4.3 Master Copy of the file plan

4.3.1 The Master Copy is that copy of the file plan containing all approved subjects and which indicates which files may be opened and how these files are to be opened and filed.

4.3.2 No file may be opened before the approval of the Officer in Charge has been obtained. This Officer should ensure that all alterations/additions is entered into the Master Copy immediately.

4.3.3 Individual case files opened according to notes in the system are not entered in the

Master Copy, but in the Register of Files Opened.

4.3.4 The Master Copy should be kept in a ring binder which makes removal of pages easy.

4.4 Register of Files Opened

4.4.1 The Officer in Charge should ensure that a Register of Files Opened is kept. See chapter 2, paragraph 2.

4.5 Necessity of an efficient filing system

4.5.1 The introduction and maintenance of an efficient filing system is necessary for the following reasons:

a) It is necessary for efficient administration

The efficient functions of any administrative body is dependent upon the speed at which needed documents can be traced and on the completeness of such documents.

In an efficient filing system all documents are put away or filed in such a manner as to locate all documents of a given case in the shortest possible time.

b) To separate the ephemeral from the valuable

It is necessary that all documents not worthy of permanent preservation be destroyed as soon as possible since it occupies valuable storage space. There is also the danger that valuable items will be lost amongst the ephemeral.

It should be kept in mind that files as a whole are preserved or destroyed, that individual documents may not be removed from files. If ephemeral and valuable items are filed on the same file it means that the ephemeral items have to be preserved.

By systematically crating files ephemeral material may be separated from valuable items by the provision of files for both types of documents.

Furthermore destruction of ephemeral documents can take place on a regular basis as disposal guidelines can be issued if an efficient filing system is used and maintained.

4.5.2 Experience has proven that the functional subject system with the additional use of the alphabetical, numeric and chronological methods delivers the best results.

4.6 **“The functional subject system”**

- 4.6.1 This system implies that the functions of the office are used to establish, which subjects officials will correspond on to execute the office’s functions. During this process main grouping of subjects (main series) are determined. Under each main series provision for all possible correspondence subjects is made.
- 4.6.2 Each office has auxiliary and line functions.
- 4.6.3 “Auxiliary” functions are these functions which every office has to exercise and forfeit to execute it’s the specific aims, for example even office needs accommodation, a budget, supplies, etc. These functions are called auxiliary functions. These help the office to carry out its functions.
- 4.6.4 Line functions are those specific functions carried out by an office, for example Education, Health.
- 4.6.5 Even system provides for auxiliary functions, such as Accommodation, Supplies and Services, Finance, etc. as well as for the specific line functions of an office.
- 4.6.6 Each main series is in turn divided into various subjects. Just as the main series cover various aspects of an office, so should the subjects in each main series.
- 4.6.7 If necessary subjects can be divided further until the finest subdivision is reached, for example a file for each person, place, vehicle etc. These are called case files.

4.7 **The requirements of a good functional subject system**

- 4.7.1 The basic requirements for a good filing system are:
- It should be logical and consequent
 - It should be flexible and
 - It should be as simple as possible
- 4.7.2 These basic requirements ensure that the system can extend or contract and that there is no confusion on the correct filing of correspondence.

4.8 **The techniques to achieve these requirements**

4.8.1 **General instructions**

- 4.8.1.1 Instructions concerning the use and application of the system as a whole are contained in the General Instructions. It is important that these instructions form part of the filing system. There should never be a “list of files” in an office.

4.8.1.3 **The following form part of the General Instructions:**

- a) Office using system
- b) When the system came into use
- c) Duties of the Officer in Charge of Archives
- d) Master Copy and Register of Files Opened
- e) Reporting of alterations/additions
- f) Accurate filing of correspondence
- g) Use of policy and routine enquiry files
- h) Correspondence unable to be classified
- i) Use of files in the main series, REPORTS, RETURNS AND INFORMATION
- j) Classified files
- k) Physical care of files
- l) Annexure covers
- m) Case files and
- n) Destruction of files

4.8.2 **List of main series**

4.8.2.1 The list of main series gives a quick overview of the filing system's contents.

4.8.2.2 All main series are included in this list. Auxiliary function main series are placed first followed by the line functions. This is because the auxiliary functions do not differ from office to office and it is unlikely that anew auxiliary function will have to be provided for while line functions can be added to.

4.8.2.3 There should be as few main series as possible, as the greater the number the greater possibility of confusion. This makes the accurate and consequent placing of correspondence difficult if not impossible.

4.8.2.4 Main series headings are always given in capitals to distinguish them from ordinary files.

4.8.3 **Specific instructions and explanations**

4.8.3.1 Explanations and instructions concerning a particular series are provided under the main series heading and those concerning a particular file directly under the file. In both cases explanations are placed in brackets. The reason for this is that the explanations do not form part of the file title and do not appear on the file cover.

4.8.3.2 Cross references are made in the same manner. It may be necessary to focus attention on another file especially if there is a possibility of confusion between aspects of a subject. In these cases notes are made at both places, for example" (For accounts, see

3/4/7/1)” and at the other file, “(For orders, see 5/1/6)”. The precise file number is always given to eliminate unnecessary searches.

- 4.8.3.3 Instructions, explanations and cross references should be made in the prescribed manner because it is necessary that these be read. If everything was explained in along complicated introduction these will not be remembered when the need arises. If these are provided at specific places they will be read.

4.8.4 **The numbering technique**

- 4.8.4.1 Files are numbered because numbers are simple and easy to use and to provide an orderly system for storage of files.

- 4.8.4.2 Numbering is carried out as follows: each main series, main subject sub-subject, etc is given a number beginning from 1 for each series and subseries. The file number is obtained by combining all the numbers and dividing them by slashes, for example 3/2/3/1.

- 4.8.4.3 Each figure in such a file number indicates an aspect of the subject of the previous number. Each file number should be analysed in order to establish what each figure means. If a file number 3/1/2/1 is analysed it could mean the following:

3 = FINANCE
 1 = Expenditure
 2 = Payment of accounts
 1 = Stationery

- 4.8.4.4 The additional use of letters should if at all possible be avoided. Use of letters mean more writing and typing and makes file numbers unnecessary long. The only purpose of letters is to indicate from which offices items originated.

- 4.8.4.5 The test to verify the use of additional reference letters is simple: are these necessary and do they serve any purpose?

4.8.5 **The underline technique**

- 4.8.5.1 Underlining is used to indicate that a particular subject is not used as a file but merely serves as a heading for further subdivision into aspects of that subjects.

- 4.8.5.2 Main series headings cannot be used as files and are thus always underlined. All subjects within a series which are too broad to serve as files are also underlined.

- 4.8.5.3 Subjects on the same level of division need not all be underlined – some serve only as

headings, others as files.

For example:

- 2/1 Functions assumed/relinquished
- 2/2 Office instructions
- 2/3 Delegation of authority
- 2/3/1 By the Permanent Secretary

4.8.5.4 Underlined subjects MAY NOT BE USED AS FILES

4.8.6 The umbrella heading techniques

4.8.6.1 This technique, together with the underlining technique gives the system flexibility and provides for logical extension. This means that related subjects are brought together under an “umbrella” subject which is then underlined.

4.8.7 “General to specific” technique

4.8.7.1 This technique is also used to make logical extension of the system possible. “Routine enquiry” files are usually placed first in a subdivision as are subjects such as “Aspects no provide for separately” and “Unspecified”.

4.8.8 “Parent file” technique

4.8.8.1 A parent file is one which serves simultaneously both as a file and as a heading, for example:

- 3/6 Orders
- 3/6/1 Stationery
- 3/6/2 Furniture

4.8.8.2 Great care should be taken not to allow these type of files to develop into general files. Usually no more than two subdivisions should be provided. If further subdivisions are needed 3/6 “Orders” should be underlined and NOT USED AS A FILE.

4.8.9 Concise and unambiguous descriptions

4.8.9.1 It is advisable that the file description consists of as few words as possible. It is sometimes possible to use one word but usually more have to be used. Although as few words as possible should be used each description should delimit a specific field and there should be no doubt as to what should be included and excluded.

4.8.9.2 Under NO CIRCUMSTANCES should descriptions such as “general” or “miscellaneous”, “correspondence” or “main file” be used. Such descriptions without

exception create the impression that items placed on these files have been placed there with no attempt being made to classify the items correctly. Disposal guidelines cannot be issued for files with such descriptions.

4.8.10 No duplication or overlapping of items

4.8.10.1 Subjects should be chosen and described in such terms that documents on the same subject will never be placed on two different files.

4.8.11 The “what about it?” technique

4.8.11.1 A file description should be relevant.

4.8.12 Case file technique

4.8.12.1 Case files are created where a large number of files have to be opened under one subject, for example, personnel files (HR), applications for bursaries where a file for each applicant has to be opened.

4.8.12.2 There are two types of case files:

- a) Case files within the file plan
- b) Case files outside the file plan (Independent case files)

4.8.12.3 Case files within the file plan

There are various methods providing for this type of file:

- a) Numerical
- b) Alphabetical
- c) Alpha-numerical
- d) Grouping of all cases beginning with the same letter of the alphabet
- e) Using a constant annexure

4.8.12.4 Independent case files

4.8.12.4.1 Where large groups of case files are involved, it is better not to allocate file numbers to each but to provide for them in a List Separate Case Files which follows its own numbering procedures. Files are not individually listed in the List of Independent Case Files, only the types are indicated, for example Vehicle Files, Personal files.

4.8.12.5 Individual case files are not listed in the Master Copy of the file plan but are entered in the Register of Files Opened.

4.8.13 **The /P technique for policy files**

- 4.8.13.1 The first file in a series or subseries ought to be the policy file. This should contain information on policy and procedures as well as all instructions and circulars on the particular subject. Where a policy decision develops from a case dealt with on another file a copy of the decision should be placed on the policy file.
- 4.8.13.2 Policy files bring together all documents concerning policy and procedures and are important to inform officials not acquainted with these in the shortest possible time.
- 4.8.13.3 Policy files have “/P” as the last component of the file number. This enables policy files not provided for originally to be created at the correct place in the filing system.
- 4.8.13.4 To distinguish policy files from the “P” group of case files the “P” in policy files is always preceded by a slash (/) while the “P” group of case files do not have this slash, for example 133/2/P is the policy file while 13/2 P is the file for the letter P.
- 4.8.13.5 At appropriate places in the file plan files for routine enquiries have been provided. These files are identified by the symbol "R" as the last component of the reference number, eg. 1/R, 1/1/R, etc. These files are for enquiries of a routine nature which require no further action subsequent to the reply.
- 4.8.13.6 The correct use of file numbers is discussed in the “General Instructions for the use of the file plan”.

4.8.14 **Separation of important and less important correspondence**

- 4.8.14.1 File subjects should be allocated in such a way as to ensure that important documents which will be permanently preserved are not placed on the same file as less important documents.
- 4.8.14.2 In the determination of file subjects this aspect should be kept in mind and provision made for files for less important documents in order to obtain maximum benefit from their regular destruction. As few less important documents as possible should be placed on files which will be permanently preserved.

4.9 Use of a file plan

- 4.9.1 A file plan is used to allocate reference numbers to incoming and outgoing items.
- 4.9.2 The following steps should be followed:
 - 4.9.2.1 First consult the List of Main Series to identify a suitable claiming by eliminating

unsuitable ones.

- 4.9.2.2 Identify all the main subjects in that main series by looking at all numbers consisting of two components, that is main series/main subject, for example 13/2/1, 13/2, 13/3 etc.
- 4.9.2.3 Suppose that 13/2 is the correct main subject. Identify all the subdivisions of the subject that is all file numbers beginning with 13/2, for example 13/2/1, 13/2/2, 13/2/3, etc. Decide on the correct main subject by eliminating unsuitable subjects.
- 4.9.2.4 If 13/2/3 is underlined or subdivided, look at the various sub files until the correct file is identified.
- 4.9.2.5 If at step 4.9.2.2 a suitable subject is not found or a suitable division at 4.9.2.3, this indicates that special provision should be made for the items. Special provision could mean the creation of a new file, a new main subject or even a new main series.
- 4.9.2.6 Consult the Officer in Charge of Archives who in consultation with the National Archives will make a suitable alteration/addition to the file plan.
- 4.9.2.7 **IMPORTANT: DO NOT** attempt to place items on the “nearest” file or on a Policy or Routine Enquiries file because no suitable file exists. Remember that everybody using the system should arrive at the same file for the same subject. This will not happen if correspondence is “pushed in” somewhere.

4.10 **Alterations/additions to file plans**

- 4.10.1 All alterations/additions (the inclusion or exclusion of an underlining is also an alteration) should be reported regularly to the National Archives for notification and approval.
- 4.10.2 For easier reference the notifications should be numbered from 1 each year, for example 1/91, 2/91, etc.
- 4.10.3 Whenever additions are reported full information on the nature of the correspondence together with recommendations for its placing should be given.
- 4.10.4 An example of how alterations/additions should be reported follows:

Head of Archives
Private Bag 13250
WINDHOEK

ALTERATIONS/ADDITIONS TO FILE PLAN 6/94

1. Approval is requested for the following alterations/additions:

1/2/3

Add new file "Interpretation and Legal Opinions".

4/3/6/9

It is felt that there is sufficiency correspondence on the subject to create a new file "Computers".

5/5/5

Change files description to "Disposal of Surplus and damaged supplies".

Main series 13

The Ministry has assumed a new function, namely the award of bursaries. The following files are suggested:

13/8 Bursaries

13/8/1 Applications for

13/8/2 Awarding of

2. Your comments/approval will be appreciated. As soon as the alterations/ additions have been approved, the amended pages will be submitted.

For PERMANENT SECRETARY: MINISTRY OF EDUCATION, ARTS AND CULTURE

4.10.5 Urgent alterations/additions can be reported telephonically. Provisional approval can be granted and a letter can follow.

4.10.6 Officers in Charge Archives, Registry Heads and corresponding officers are welcome to discuss alterations/additions with Archives staff before these are reported.

4.10.7 As soon as approval for alterations/additions has been obtained, the relevant page (s) should be retyped and a copy submitted to the Head of Archives.

4.10.8 The amended pages should be distributed to all copy holders of the filing system. It is necessary tht the Registry Head keep an up to date list of copy holders.

4.11 **Practical working of a filing system**

4.11.1 All officers working with the filing system should constantly keep in mind its practical

working to ensure that the necessary adjustments are made.

- 4.11.2 As new subjects develop, new files have to be created and where necessary old files divided or amalgamated. Files with titles such as “Unspecified” or “Aspects not separately provided for” should be watched carefully to see they don’t develop into “general” files. Where necessary, further files should be created.
- 4.11.3 Any problems experienced should be brought to the attention of the Officer in Charge of Archives.

5. **OTHER ARCHIVES**

5.1 **General**

- 5.1.1 Each office has to compile a List of Other Archives consisting of all archives not contained in correspondence files.
- 5.1.2 Examples of Other Archives include registers, plans, photographs, indices, computer tapes, computer disks, computer print-outs, punch cards, microfiche, own publications, films, videos.

5.2 **List of Other Archives**

- 5.2.1 Each Office compiles one or more Lists of Other Archives according to the size and complexity of the Office.
- 5.2.2 The list should contain only current other archives.
- 5.2.3 Items are divided into categories, numbered from A. Each category is listed on a separate sheet of paper.
- 5.2.4 The following categories are in existence.

- A Reports and minutes
- B Financial records
- C Non-financial registers
- D Cardex systems, index cards
- E Publications issued by office
- F Maps and plans
- G Photographs
- H Forms
- I Sound recordings
- X Word processor archives

Y Microforms

Z Computer archives

- 5.2.5 Word processor archives are always listed as category X, microforms as category Y and computer archives as category Z.
- 5.2.6 Space should be left after the last item in each category for future additions.
- 5.2.7 Under “Office where kept” the location of each item is given.
- 5.2.8 The following example of a List of Archives is just that, an example to be used as guidance when compiling a List of Other Archives.

(EXAMPLE)

LIST OF OTHER ARCHIVES

Title

MINISTRY.....

1. GENERAL INSTRUCTIONS

- 1. Control over list
- 2. Reporting of additions and alterations
- 3. Master Copy of List of Other Archives
- 4. Destruction
- 5. Destruction Register
- 6. Identification
- 7. Transfer
- 8. Prescribed destruction certificate

2. CONTENTS

- A. Minutes and reports p.....
- B. Financial records and Registers p.....
- C. Cardex systems, index cards p.....

D. Publications issued by department	p.....
E. Maps and plans	p.....
F. Photographs	p.....
G. Sound recordings	p.....
X. Word processor archives	p.....
Y. Microforms	p.....
Z. Computer archives	p.....

3. Index (An alphabetical index can be compiled if the list consists of a large number of items which cannot be traced easily by means of the contents).

General instructions for the use of List of Other Archives

1. **Control over list**

This list is under the control of (name of the post occupied by the Officer in Charge). No alterations/additions may be made without the approval of this officer.

2. **Reporting of additions/alterations**

All additions/alterations should be reported to the Head of Archives for approval and the issue of disposal authority.

3. **Master Copy of List of Other Archives**

The Master Copy of the List of Other Archives should be kept in a separate cover and should be identified as such on the outside. This copy should be kept by the Officer in Charge, who should ensure that it is up to date, and that the instructions in paragraph 2 are being followed.

4. **Destruction**

- 4.1 After disposal guidelines have been obtained in the prescribed manner, applications for disposal authority should be made on a regular basis at least once a year. After destruction of the archives, the prescribed destruction certificate should be submitted.

- 4.2 Where Other Archives are subject to audit, the date of the last audit inspection should be indicated in the request for disposal.

5. **Destruction register**

- 5.1 These instructions do not apply to magnetic media listed in categories X and Z.
- 5.2 As soon as disposal guidelines have been issued a destruction register should be opened.
- 5.3 This register should be divided into sections on a yearly basis, e.g. 1991, 1992, 1993, etc. As soon as an item has been closed and it has a V disposal guideline it is entered under the year in which it may be destroyed. An item closed in 1990, and having the disposal guideline V.3, will be entered on the 1993 page. Use of this method determines for which items disposal authority should be requested in which year.
- 5.4 It is recommended that a loose leaf register be used for this purpose as it is impossible to foresee how many pages will be used in a particular year.

6. **Identification**

- 6.1 All items should be clearly identified by the number allocated to each on the List of Other Archives. This number should appear in a rectangular block together with the disposal guidelines.
- 6.2 This instruction does not apply to word processor and computer archives listed in categories X and Z.

7. **Transfer**

Before transfer to the archives depot, all items should be clearly identified according to the numbers appearing on the List of Other Archives. The name of the office/section which used the items should be clearly shown.

8. **Destruction certificate**

Whenever Other Archives are destroyed in terms of a disposal authority, the prescribed destruction certificate should be submitted to the Head of Archives.

DESTRUCTION CERTIFICATE

I hereby certify that the items Other Archives on the list below, which occupied linear metre shelving space/storage space, were today destroyed in terms of authority..... (this number should be inserted once it has been issued by the Head of Archives).

6. **DISPOSAL**

6.1 **General**

6.1.1 Disposal means that decisions are made as to the future of all archives in an office.

6.1.2 Archives may be destroyed or permanently preserved.

6.1.3 NO archives may be destroyed WITHOUT disposal authority.

6.1.4 Disposal authority is the authority obtained from the Head of Archives to destroy archives or to transfer these to the National Archives.

6.2 **Disposal instructions**

6.2.1 The following instructions are used:

D destroy immediately

D followed
by a figure destroy after the number of years following the D

A.20 transfer to the National Archives 20 years after the item has been closed.

6.2.2 The retention period of 20 years is laid down by legislation, but the Head of Archives may authorize earlier transfer.

6.2.3 Additional symbols are used for computer archives.

6.3 **Disposal of terminated filing systems**

6.3.1 "Terminated correspondence files" are those files from a filing system which has been discontinued and thus no further correspondence will be placed on these files. These files must not be confused with the closed volumes of a current filing system.

6.3.2 Requests for disposal authority should be submitted in duplicate to the Head of Archives in the prescribed form (see 6.3.9).

- 6.3.3 The files should be listed in numerical or alphabetical order, and each volume is listed separately.
- 6.3.4 Case files need not be individually listed but the number of files, the subject covered, and the basis upon which the files were opened, e.g. according to persons, places, etc., as well as the period covered, should be indicated.
- 6.3.5 In the column "Disposal Suggestion" the Officer in Charge of Archives should indicate how the files should be disposed of.
- 6.3.6 The following symbols should be used:
- D** Destroy immediately
- D followed** In cases where the files cannot be destroyed immediately a retention period should be suggested, by a figure e.g. D.5, which means destroy 5 years after the date of the last item on the file. In determining this retention period only the needs of the office concerned should be considered, that is the administrative value of the file for the office concerned.
- A.20** This indicates that the file has permanent value (administrative) for the office concerned, and thus may not be destroyed. The symbol means that as soon as the file is twenty years old, it is transferred to an archives depot, unless otherwise agreed upon.
- It is a function of the National Archives to determine whether a file has research value or not, and thus whether or not an A.20 classification is justified. Advice from the office creating the file is welcomed.
- 6.3.7 All the files opened should be listed including those still needed for reference purposes.
- 6.3.8 This list should not be compiled from index cards or other finding aids, but from the files themselves. This ensures a true picture of the files.
- 6.3.9 An example of a request for disposal authority for terminated correspondence files follows:

REQUEST FOR DISPOSAL AUTHORITY: CORRESPONDENCE FILES

1. Office where filing system was used:

.....

2. Period covered by files:

.....

3. Total linear metre occupied by files:

.....

4. Officer to be contacted regarding disposal instructions:

Name: Tel:

5. Disposal authority number:
 (Will be filled in by the National Archives)

File number	Description	Period	Disposal	
			Suggestion	Instruction

6.4 **Disposal of current filing system**

- 6.4.1 The filing system should have been in operation for at least three years before an application for disposal guidelines is considered.
- 6.4.2 The guidelines shall only be applicable to an approved filing system which has been correctly maintained.
- 6.4.3 Two copies of the approved filing system, together with suggested disposal instructions for each file, written in pencil, should be submitted.
- 6.4.4 The following symbols are to be used in the "Disposal" column:

D Can be considered for immediate destruction

D followed by a figure In cases where files cannot be destroyed immediately, a retention period should be suggested, e.g. V.5, which means that the years after the date of the last item on the file disposal authority must be requested.

In determining this retention period, only the needs of the office concerned need be considered, i.e. the administrative value of the file for the office concerned.

A.20 This indicates that the file has permanent administrative value for the office concerned and thus may not be destroyed. The symbol A.20 means that as soon as the file is twenty years old, it should be transferred to the archives depot, unless otherwise agreed upon.

It is a function of the National Archives to determine whether or not a file has potential research value and thus whether or not an A.20 classification is justified. Advice from the office creating the file is welcomed.

- 6.4.5 If the filing system fulfils the requirements laid down in paragraph 6.4.2 the National Archives shall insert a disposal guideline in the disposal column and return one copy to the office. This copy shall then become the Master Copy and replaces the existing Master Copy. If disposal guidelines are issued, the Officer in Charge should request disposal guidelines from the National Archives annually for any additions made.
- 6.4.6 UNDER NO CIRCUMSTANCES MAY ANY ARCHIVES BE DESTROYED IN TERMS OF THESE GUIDELINES BEFORE THE HEAD OF ARCHIVES HAS

ISSUED AUTHORITY FOR THIS. APPLICATION FOR THIS DESTRUCTION SHOULD BE MADE ACCORDING TO THE INSTRUCTIONS IN PARAGRAPH 6.4.7.

6.4.7 An example of an application to dispose of current correspondence files follows:

APPLICATION FOR DISPOSAL AUTHORITY: CORRESPONDENCE FILES

1. Office using filing system/files

.....

2. Period covered by filing system/files

.....

3. Total linear metre occupied by files

.....

4. Officer who may be contacted concerning disposal suggestions

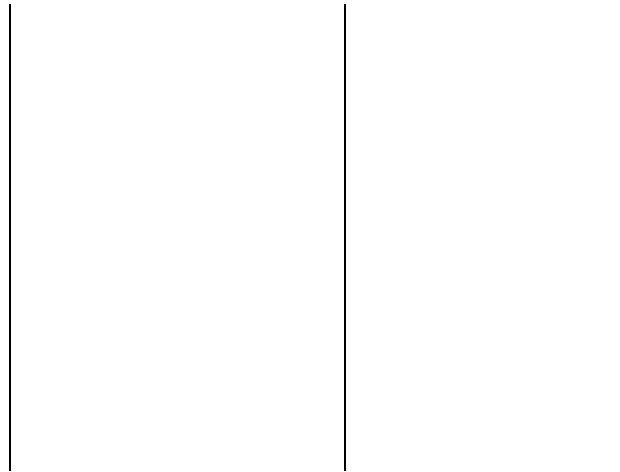

Name:

Telephone number:

5. Disposal authority number

(To be filled in by National Archives)

File number	Description	Period	Disposal	
			Suggestion	Instruction

6.4.8 If the filing system does not fulfil the requirements laid down in 6.4.2, no disposal guidelines will be issued.

6.4.9 **Disposal in terms of a disposal authority**

6.4.9.1 Authorities may not be applied to any archives other than those specified in terms of the authority, without the permission of the Head of Archives.

6.4.10 Transfer of archives in terms of an authority should be arranged by correspondence, or telephonically, with the Head of Archives (See chapter 7).

6.4.11 Destruction of archives in terms of an authority should take place in the office concerned. The Officer in Charge should ensure that no unauthorized destruction takes place and that the retention periods of the files are complied with.

6.4.11.1 Destruction of archives should take place regularly, at least once a year.

6.4.12 Whenever archives are destroyed in terms of a disposal authority, a destruction certificate in the form prescribed below should be submitted to the Head of Archives.

DESTRUCTION CERTIFICATE

I hereby certify that the archives on the list below and which occupied linear metre shelving space/storage space were today destroyed in terms of disposal authority

Name and rank

Office

Date

Number	Description	Date

6.4.13 Whenever a series of case files is destroyed, e.g. personal files or item files, it is only necessary for the first and last number to be indicated in the first column, a global description in the second column, and the period covered in the third column.

6.5 **Application for disposal authority: terminated Other Archives**

6.5.1 A clear distinction should be made between terminated Other Archives and current Other Archives. Terminated Other Archives are the residue of:

- a) Activities no longer carried out by the office concerned
- b) a previous system now replaced
- c) items taken over from another office but never added to
- d) items created for a limited short term purpose and which are no longer in use.

6.5.2 Applications for disposal authority should be submitted to the Head of Archives in the manner indicated in paragraph 6.5.7.

6.5.3 The list should be submitted in duplicate.

6.5.4 Items should be listed according to categories.

6.5.5 In the disposal column, under "SUGGESTED", the Officer in Charge should indicate a disposal instruction for each item. The following symbols should be used:

- D Can be considered for immediate destruction.

D followed by a figure In cases where an item cannot immediately be destroyed, the period for which it should be kept should be indicated after the V, for example the symbol V.5 means that the item may be destroyed five years after the date of the last item on the file.

In determining this period, only the office's requirements are taken into consideration, in other words the length of time that it has administrative value for the office concerned before it may be destroyed.

A.20 The items have a permanent administrative value for the office concerned and may not be destroyed. The symbol indicates that as soon as the item is twenty years old, or according to agreement, it should be transferred to an archives depot.

It is the function of the National Archives to determine whether or not an item has research value and thus an A.20 classification. Advice from the office creating the item will be welcomed.

6.5.6 As soon as disposal authority has been issued, one copy of the schedule where the disposal instructions have been indicated in the "INSTRUCTION" column will be returned to the office.

6.5.7 An example of an application for disposal authority for terminated Other Archives follows:

REQUEST FOR DISPOSAL AUTHORITY - TERMINATED OTHER ARCHIVES

1. Office where archives were in use.....

2. Period covered by archives.....

3. Linear length of archives (in metres).....

4. Officer who may be contacted concerning disposal instructions:

Name.....

Telephone number.....

5. Date of last audit inspection:

6. Authority number.....

(Will be inserted by National Archives)

DESCRIPTION	OFFICE WHERE KEPT	DISPOSAL	
		SUGGESTION	INSTRUCTION
<u>REPORTS AND MINUTES</u> Reports of Petrol Committee	1940-1947	A.20	
Minutes of Rent Board 1953-1978 1953-1978	A.20		
<u>REGISTERS</u> Stamp register	1979	V.5	

6.6 **Application for disposal guidelines: List of Other Archives**

6.6.1 The list should be submitted in duplicate. The Officer in Charge should indicate, in the "DISPOSAL" column under "SUGGESTED", whether an item should be permanently preserved or destroyed. The following symbols should be used:

D Can be considered for immediate destruction.

D followed by a figure In cases where an item cannot be considered for immediate destruction, the period for which it should be kept should be indicated after the V., for example the symbol V.5 means apply for destruction five years after the last item on the file.

In determining this period, only the office's requirements are taken into consideration, in other words the length of time that it has administrative value for the office concerned before it may be destroyed.

A.20 The item has a permanent administrative value for the office concerned and may not be destroyed. The symbol indicates that as soon as the item is twenty years old, it should be transferred to an archives depot, or as agreed upon.

It is the function of the National Archives to determine whether or not an item has research value and thus an A.20 classification. Advice from the office creating the item will be welcomed.

6.6.2 The following additional symbols are used for computer archives (category Z):

A Retain
 D.7 Destroy/erase after 7 years
 DD Destroy/erase daily
 DK Destroy/erase once data has been transferred or revised
 DL (File number) Follow disposal guideline of the file concerned
 DM Destroy/erase monthly or after one month
 DP Destroy/erase once print-out or new print-out is available
 DT Destroy/erase once project is complete
 DV Dispose according to instruction in footnote
 DW Destroy/erase weekly or after one week
 DX Erase obsolete data

6.6.3 Any of the symbols used for computer archives may be used for word processor archives, but the following are most commonly used:

DK Destroy/erase as soon as data is added or revised
 DL Follow disposal instruction of file on which print-out is placed
 DP Destroy/erase as soon as print-outs/new print-outs are available.

6.6.4 The following symbols may be used for microform archives:

A Master film should be transferred immediately.
 A.20 Security copies/records should be transferred to the archives depot after 20 years.
 D Apply for disposal authority immediately after photographing and checking.

D followed Apply for disposal authority after the number of years indicated by the figure.
by a figure

6.6.5 As soon as disposal guidelines have been issued, one copy of the list with the disposal guidelines indicated in the "GUIDELINE" column will be returned to the office concerned. This copy then becomes the Master Copy of the List of Other Archives.

6.6.6 UNDER NO CIRCUMSTANCES MAY ANY ARCHIVES BE DESTROYED ACCORDING TO THESE GUIDELINES BEFORE THE HEAD OF ARCHIVES HAS GRANTED AUTHORITY. Application for this authority should be made according to the instructions in paragraph 6.7

6.7 **Application for disposal authority: current Other Archives**

6.7.1 Applications for disposal authority should be sent to the Head of Archives in the form prescribed in paragraph 6.7.6.

6.7.2 The schedule should be submitted in duplicate.

6.7.3 Items should be listed according to categories.

6.7.4 The Officer in Charge should indicate in the "Guideline" column the guideline suggested by the National Archives. (See paragraph 6.4.7).

6.7.5 As soon as the Head of Archives has granted disposal authority one copy of the schedule with the disposal instructions in the "disposal instruction" column will be returned to the office.

6.7.6 An example of a request for disposal authority follows:

APPLICATION FOR DISPOSAL AUTHORITY: CURRENT OTHER ARCHIVES

1. Office where archives in use:

2. Period covered by archives:

3. Total linear metre:

4. Officer to be contacted concerning disposal suggestions:

Name:

Telephone number:

5. Date of last audit inspection:

6. Disposal authority number:

(Will be filled in by National Archives)

DESCRIPTION	PERIOD	DISPOSAL	
		GUIDELINE	INSTRUCTION

6.8 **Disposal in terms of an authority**

- 6.8.1 After receipt of the authority the Officer in Charge should dispose of the archives according to the disposal instructions in the authority.
- 6.8.2 This authority may not be applied to any other archives without the permission of the Head of Archives.
- 6.9 Transfer to the National Archives in accordance with an authority may be arranged in writing or telephonically with the Head of Archives. See chapter 7.
- 6.10 Destruction in accordance with an authority is carried out by the office itself. The Officer in Charge of archives should ensure that no unauthorized destruction takes place and that the prescribed retention periods are adhered to.
- 6.8.5 Whenever archives are destroyed a destruction certificate in the following form should be submitted.

DESTRUCTION CERTIFICATE

I hereby certify that the archives on the list below, and which occupied linear metre shelving space/storage space were today destroyed in terms of disposal authority.....

Item number or volume number or parcel number	Description	Period (years)	Disposal suggestion

--	--	--	--

7. **TRANSFER AND RE-ISSUE OF ARCHIVES**

7.1 In accordance with the provisions of the Archives Act, all archives, except master film material, reaching the age of twenty years should be transferred to the archives depot.

7.2 Master film material should be transferred immediately after production.

7.3 **Postponement of transfer**

7.3.1 Requests for postponement of transfer should be submitted to the Head of Archives. The request should include a complete list of the relevant archives, a motivation for the postponement of transfer, and a specified period of further retention.

7.3.2 Total exemption from transfer cannot be considered.

7.4 **Earlier transfer**

7.4.1 Archives not qualifying for transfer, but which are no longer in use or cannot be stored by an office, may, with the permission of the Head of Archives, be transferred at an earlier date.

7.5 **Transfer procedure**

7.5.1 The Officer in Charge submits a list in duplicate to the Head of Archives. An example of a transfer list follows:

- 7.5.2 No transfer may take place until the permission of the Head of Archives has been obtained.
- 7.5.3 Offices outside Windhoek should pack the archives in steel trunks, obtainable on request from the National Archives and send these by passenger train (the costs to be covered by the Ministry of Education and Culture).
- 7.5.4 Local offices may make arrangements telephonically with the National Archives for the transfer of archives.
- 7.5.5 The archives should be accompanied by a transfer list (in duplicate), see paragraph 7.5.1.
- 7.5.6 Archives which are transferred should be arranged prior to transfer - i.e. they should be in numerical or alphabetical order, and this order should be followed on the transfer list.
- 7.5.7 All registers, filing systems and indices concerning the archives should accompany the archives, except in cases where the Head of Archives has decided otherwise.
- 7.5.8 If any register is missing, the Officer in Charge is responsible for the compilation of a replacement register. This fact should be noted on the cover of the register.
- 7.5.9 Filing systems, registers and indices which are transferred, should clearly bear the name of the office of origin, as well as a description of the items and the purpose for which it was compiled.
- 7.5.10 Receipt of items will be acknowledged by the return of one copy of the transfer list endorsed by the National Archives.
- 7.6 **Re-issue of archives transferred to archives depot**
- 7.6.1 Only the office creating or transferring the archives, or its legal successor, may request the re-issue of archives.
- 7.6.2 Re-issue may be arranged by letter or the items may be fetched from the archives depot by an officer of the office concerned.
- 7.6.3 In cases where an office requests that a transferred item be exempt from return, the office should apply in writing to the Head of Archives.
- 7.6.4 **Re-issue by post/rail**
- 7.6.4.1 This form of re-issue may only be used by offices outside Windhoek.

- 7.6.4.2 If a specific item is required, a written request containing full particulars of the item, e.g. file number, description, etc., should be submitted.
- 7.6.4.3 The item(s) will be sent by registered mail or passenger train and should be returned in the same manner.
- 7.6.4.4 Archives lent in this manner should be returned within 60 days unless written permission for an extension of the loan period is requested and granted.
- 7.6.5 Personal re-issue
- 7.6.5.1 Re-issue of archives to officials will only be allowed if the prescribed re-issue form is properly completed. See page 7-5.
- 7.6.5.2 The archives should be returned within 21 days unless written permission is requested and granted.
- 7.6 Transfer of archives to another office, institution or person
- 7.6.1 NO archives may be temporarily or permanently transferred to any person or institution not falling under the Archives Act, without the permission of the Head of Archives.
- 7.6.2 Whenever archives are transferred from one office to another falling under the Archives Act the Officer in Charge of Archives should inform the Head of Archives and submit a list of all items transferred.

File number	Volume Number	Description	Issued	Returned

8. ACCESS TO ARCHIVES IN OFFICES

8.1 Control over access

8.1.1 Access to archives by officers for purposes other than their official duties, and access by members of the public, is subject to the approval of the head of the office, and the permission of the Head of Archives. (See article 10 (2)(a) of the Archives Act).

8.1.2 In cases where legislation, other than the Archives Act, allows access to specific archives, this legislation is valid.

8.2 Procedures

8.2.1 It is required that:

- a) A written request to consult the archives concerned be submitted by the person concerned (hereafter referred to as "a researcher");
- b) the head of a government office, an office of a local authority or statutory institution who has been entrusted with the care, custody, and control of the specific archives hereafter referred to as the "head of the office", should satisfy himself as to the bona fides of the researcher in order to ascertain that consultation of the archives would not bring the State or the particular office into disrepute;
- c) Consultation of the archives takes place under constant supervision;
- d) Two annotated drafts of the researcher's work be submitted before publication or duplication to the office concerned for approval of those portions pertinent to the office. "Annotated" implies that all sources of information be acknowledged by means of footnotes or other recognized methods. One of the annotated drafts should be sent to the Head of Archives; and

e) The head of the office specifies these conditions in writing.

8.2.2 The head of the office sends the request to the Head of Archives who will either grant or refuse permission and impose further conditions if considered necessary.

8.3 Conditions

8.3.1 The head of the office concerned, in consultation with the Head of Archives may determine the conditions under which a researcher may work.

8.3.2 In addition to any conditions determined by the head of the office, the following conditions contained in the Archives Act and regulations are valid:

a) If any form of publication or duplication of the research occurs, one copy should be given free of charge to the office concerned, and one copy to the Head of Archives;

b) Documents should be handled with the greatest of care;

c) Pages or items may not be folded or marked in any way;

d) The order of the items may not be disturbed;

e) No tracings may be made, and no form of copying is allowed;

f) If a researcher damages any item during consultation, he/she should report this to the head of the office; and

g) Only the use of pencil or ball-point pen is allowed when making notes.

8.3.3 The researcher must sign an undertaking agreeing to the conditions set out. This undertaking should be filed on a relevant file.
